

Course Outcomes AET-269 / 270 Internship

Course Title: AET-269 / 270 Internship

Course Instructor(s): Anthony Valente

Programs: Alternative Energy Technology

Expected Learning Outcomes

The student shall be able to apply all skills learned through the program to the work environment.

The student will perform in a professional manner at the assigned work location.

Assessment

Assessments will include:

Evaluation of reporting documents required to be submitted by the student.

Confirmation through the participating company that the student performs up to expected standards for industry through reporting documents required to be turned in by said company.

Validation

1. The evaluation of student performance and ability to transfer knowledge to the internship assignment.
2. Consult Internship participating companies as to performance of interns and hired students based on ability and knowledge gained.

Results

The results will show the level of retention of the classroom materials.

The results will show the ability of the student to transfer textbook information to hands-on applications.

The results of the participating company's evaluation will allow us to place a rate of success in our database for ongoing improvement to the course and advise us of changes in technology and industry standards.

Follow-up

The data will be evaluated to improve teaching techniques

The data will be evaluated to help us remain up to date with technology changes.

Budget Justification

Update textbook to include changes in technology

Update classroom equipment to keep pace with changes in technology
