Course Outcomes Guide

Directions: Please complete this form to document your progress toward improving student learning. For each item, indicate your progress and your anticipated next steps. Thank you!

Course/Program Title: CHM 203
Organic Chemistry 1
Date: May 2014
Course/Program Team: Nancy Thorpe

Expected Learning Outcomes
1. Apply both quantitative and qualitative thinking processes and reasoning skills to core content for organic chemistry.
2. Communicate organic chemistry concepts in writing and by use of appropriate technology and proper terminology and nomenclature to both scientists and non-scientists (e.g., maintain a laboratory notebook).
3. Collect, analyze, and evaluate empirical data to substantiate chemical concepts.
4. Apply course content to environmental and health-related issues (e.g., pollution, global warming, toxicology, pharmacology, environmental health).

Assessment (How do or will students demonstrate achievement of each outcome? Please attach a copy of your assessment electronically.)
1. In-class exams with combination of multiple-choice, short answer, problem solving and essay.
2. Formal written laboratory reports with a grading rubric.
3. Written laboratory mid-term and final exams.
4. Research papers on environmental and human health issues.
5. American Chemical Society (ACS) standardized final exam for the first semester only.

Validation (What methods have you used or will you use to validate your assessment?)
The ACS exams are nationally normalized exams. I use the 1st semester exam for CHM203 in the fall semester.

Results (What do your assessment data show? If you have not yet assessed student achievement of your learning outcomes, when is assessment planned?)
I have been implementing the ACS exam and collecting data since Fall ’09. Please see attached results. Starting in Fall ’12 this course has been taught as a hybrid course and the results on the ACS exam are much improved, as well as the overall class average.

Follow-up (How have you used or how will you use the data to improve student learning?)
This is the first year teaching this course as a hybrid class with a one-hour recitation. Overall, the course statistics remain about the same, the results of the ACS exam have improved each semester, but retention and success rate are down a little, due to the online nature. We are now in the new STEM building and have purchased an NMR spectrophotometer, FT-IR, and gas chromatograph which will enhance our students’ technology-based learning. Additional training for staff and faculty will be needed to ensure proper use and educational learning. We will continue to use the 1-semester ACS final exam. A summer student internship will be conducted.
this summer to develop protocols and laboratories for using the various instrumentation methods in the course.

**Budget Justification** (What resources are necessary to improve student learning?)

I will need resources to purchase the ACS exams, at least 20 exams. The enrollment has been increasing so additional exams will need to be purchased. Money for NMR training is also requested.

### Item Analysis

**Weakest Content Areas**

*% Walk-away Fs = Did not take the final exam and received a grade of F.*

**ACS 1st semester organic chemistry exam given. National mean: 38.61/70**

***Course taught as hybrid for the first time.***

### Content Areas

Stereochemistry, reaction mechanisms, nomenclature, and reaction products.
