

Cybersecurity

What is cybersecurity?

Cybersecurity is the body of technologies, processes, and practices designed to protect networks, computers, programs, and data from attack, damage, or unauthorized access. In a computing context, the term "security" implies cybersecurity.

On a global scale, cyber crimes such as stolen data, identity theft, and fraud cost the worldwide economy as much as \$575 billion per year.

What does a computer security specialist do?

Computer security specialists plan, coordinate, and maintain an organization's information security. These workers also educate users about computer security, install security software, monitor networks for security breaches, respond to cyber attacks, and, in some cases, gather data and evidence to be used in prosecuting cyber crime. Computer security specialists are expected to protect computers and servers from damage caused by viruses, unauthorized access, deletion, or theft of important and private information. Information security analysts plan and implement security measures to protect an organization's computer networks and systems. Their responsibilities are continually expanding as the number of cyber attacks increase. (source: www.bls.gov/ooh).

Individuals who excel in this field typically exhibit good critical thinking skills (including

complex problem solving) as well as the ability to communicate effectively, exercise good judgment and decision making, and appropriately manage their time.

What is the employment outlook?

According to the U.S. Bureau of Labor Statistics, employment of network and computer systems administrators is expected to increase by 6 percent from 2016 to 2026. Demand for information technology (IT) workers is high and should continue to grow as firms invest in newer, faster technology and mobile networks. Growth also is expected as the use of IT in healthcare increases (source: www.bls.gov/ooh).

Job prospects will be best for college graduates who possess the latest technological skills, particularly graduates who have supplemented their formal education with relevant work experience.

What are the average earnings?

Earnings will vary depending on experience, education, certifications, geographic location, and duties. Median annual wages of network and computer systems administrators were \$81,100 in 2017. The lowest 10 percent earned less than \$49,830, and the highest 10 percent earned more than \$130,200 (source: www.bls.gov/ooh).

In 2017, the annual mean wage of Maryland network and computer systems administrators workers was \$107,240, making it the top paying state for this occupation (source: *www. bls.gov/ooh*).

Why should students choose HCC?

- HCC is the regional leader in cybersecurity programming. The college currently offers two associate degrees in cybersecurity and a number of specialized certificates.
- In 2015, HCC was one of the first community colleges in the nation to be named as a Center of Academic Excellence for Two-Year Education in information assur-

ance (CAE2Y) for the second time by the National Security Agency.

- HCC cybersecurity classes are taught in a five-story STEM (Science, Technology, Engineering, and Math) Building that features a state-of-the-art cybersecurity penetration testing lab.
- HCC has aligned many of its cybersecurity courses with Cyberwatch, a consortium of over 40 colleges, businesses, and government agencies. This alignment allows students to transfer seamlessly from HCC to a four-year college to complete their bachelor's degrees.
- Upon program completion, students will be prepared for several industry standard certification exams including:
 - CompTIA A+, Network +, Security +
 - EC Council Security 5, Network 5, E|NSA, C |EH (Certified Ethical Hacker)
- Maryland is ranked fourth in the nation for the highest cybersecurity job openings. Students who train at HCC will be wellplaced to transition to the cybersecurity field.

Important information about the educational debt, earnings, and completion rates of students who attended these programs can be viewed at *www.hagerstowncc.edu/gepd*

What are the program options?

There are two degree options in cybersecurity at HCC. The A.S. degree has been developed for students wishing to transfer to a four-year institution. With an emphasis on general education, programming, cybersecurity, and forensics classes, this program of study will prepare the student to succeed in upper level courses required at the transfer school.

The A.A.S. degree is for students who wish to enter the workforce after a two-year program of study. The emphasis of this program is to introduce students to the technologies used in the field today, provide hands-on instruction, and prepare students for industry standard certification examinations.

In addition to two degrees, HCC now offers three "stackable" certificates: network security, advanced network security, and Cisco CCNA prep.

Network Security

The certificate program in network security is designed for students interested in a career in network security. Students who complete this program will gain knowledge to prepare for industry certification examinations. Currently, three national certifications are part of this program: CompTIA Network+ and Security +; and Cisco Certified Entry Networking Technician.

Advanced Network Security

The certificate program in advanced network security is designed for students who have completed the requirements for a certificate in network security. Students who complete this program will gain knowledge to prepare for industry certification examinations.

Cisco CCNA Prep

The Cisco CCNA prep certificate is designed for the student who desires to complete the Cisco Network Academy and prepare for the industry recognized CCNA certificate examination.

A.A.S. Degree

Cybersecurity

The career program in cybersecurity is designed for students who plan to enter the field of information security. Major areas of study include network fundamentals, ethics, penetration testing, computer forensics, and operating systems.

Cybersecurity

The transfer program in cybersecurity is designed for students who plan to transfer to a four-year institution and major in cybersecurity, information assurance, or a related field. Students should identify an intended transfer institution as early as possible and complete appropriate courses. Students should always confer with advisors and transferring institutions for specific requirements as these are subject to change.
