Course Title:  PHY 203 – Principles of Physics 1, 4 credits
Program Team:  Paul Jozik

Expected Learning Outcomes:
1. Use mathematical models as a medium for quantitative reasoning and describing physical reality.
2. Use graphical models to analyze laboratory data.
3. Apply the classical conservation laws as a basis of deriving and understanding physics principles.
4. Describe physics concepts verbally, graphically, and mathematically
5. Solve problems individually and collaboratively
6. Use software to analyze physics experiments
7. Access, process, analyze and synthesize scientific information.

COURSE CONTENT OBJECTIVES:
1. To learn basic principles of physics through experiments and exercises. The lab sessions will be used to introduce, reinforce, and/or enrich the treatment of related topics studied in the lecture portion of this course.
2. To learn the proper use of various kinds of laboratory equipment.
3. To learn how data can be collected, presented, and interpreted in a clear and orderly manner.
4. To learn problem solving skills related to physics principles and interpretation of laboratory data.
5. To determine error in laboratory measurements and techniques used to minimize such error.
6. To learn how to function as a member of a lab group, respecting and assisting all fellow members of the group. In order for each student to derive the greatest benefit from this course it is necessary for each student to:
   a. be an active participant in each part of all lab exercises: set up, measurement, clean up, etc.
   b. record all data being collected in an organized manner
   c. perform each calculation related to the laboratory activity

Assessment (How do or will students demonstrate achievement of each outcome?)
four lecture exams, two laboratory exams, and lab reports

Validation (What methods have you used or will you use to validate your assessment?)
Students passing with a 75% or better

Results (What do your assessment data show? If you have not yet assessed student achievement of your learning outcomes, when is assessment planned?)
A large proportion of the students are achieving success in this course. A common relationship is that students who do not complete assigned problems and/or lab reports make up a disproportionately large portion of the students who begin the course and either do not complete the course or do not achieve success by the end of the semester.

Follow-up (How have you used or how will you use the data to improve student learning?)
I look for weaknesses in the students’ performance on the individual problems on each exam and in their lab reports. Adjustments are where deemed appropriate.
**Budget Justification** (What resources are necessary to improve student learning?)

No additional resources needed.
