What is the Computed Tomography (CT) Program?
Computed tomography (CT) is a medical imaging modality that produces cross-sectional images of the body using x-rays and digital computers. The computed tomography technologist is a skilled professional who is qualified by education and clinical experience to produce cross-sectional images of the patient.

How is the curriculum designed?
The curriculum is divided into areas of study consisting of lecture, laboratory, and clinical experiences. Content areas of the curriculum include anatomy and physiology, professional ethics, CT safety and equipment operation, CT positioning and procedures, imaging techniques, and pathology.

Where do CT technologists work?
Certified CT technologists work in hospitals, private offices, surgical centers, oncology centers, and with mobile CT imaging companies and temporary medical staffing agencies.

What skills are needed to excel in this profession?
- Good critical thinking skills
- Good written and verbal communication skills
- The ability to work well with others and care for patients

- A professional attitude and appearance
Note to students: You are entering a profession that operates 24 hours a day, 7 days a week, and 365 days a year. Work shifts include day, evening, and night hours.

What is the employment outlook for this career?
CT technologists and radiographers are in high demand. Job growth is expected to increase by about 12 percent from 2016 to 2026 (source: www.bls.gov/oco).

What do CT technologists earn?
Earnings depend on experience, education, and geographical location. According to the U.S. Bureau of Labor Statistics, the median annual wage for radiographers was $57,450 in 2016 (source: www.bls.gov).

Why should I choose HCC?
- HCC has a flexible clinical practicum, which provides students with exposure to a variety of clinical settings, learning experiences, and locations
- Graduates of HCC’s CT Imaging Program are eligible to sit for the American Registry of Radiologic Technologists (ARRT) certification examination
- The CT Imaging Program focuses on the physics, theories, application, and instrumentation of computed tomography equipment needed for the ARRT certification examination
- Course content covers imaging of the body areas in relation to their anatomical composition, pathology, and physiology, as well as image quality
- Lecture courses for the CT Imaging Program are provided online or in an online/lecture hybrid format

What are the admission requirements?
All computed tomography students must:
1. Receive a minimum grade of 75 percent in each computed tomography course.
2. Meet program competency requirements.
3. Students have two years to complete education and clinical requirements in order to be eligible to submit an application to ARRT.
4. Students planning to enroll in the clinical education component of the program must meet with the course instructor no later than one month prior to start of the academic semester.
5. Enrollment in RAD 220 must be within 12 months of completing RAD 218.

Students who receive a final mark of unsatisfactory in the clinical laboratory or clinical experience despite a passing theory grade, will not be permitted to progress in the computed tomography program and will receive a final grade of “F” for the course and are not eligible for readmission.

Students who do not meet program, course, technical, health and radiation standards that result in termination from the computed tomography program by the College are not eligible for readmission. This includes students who cannot meet safety standards, and students who violate the college’s Honor Code and Standards of Conduct; the radiography program Standards of Conduct; and the American Registry of Radiologic Technologists Standards of Ethics.
How long will it take me to complete this program?
On average, it takes five semesters to complete this program. The program can be completed in less time depending on the number of classes a student takes in a given semester. A grade of C or higher is required in each course to progress to next semester. Students enrolled in the CT Imaging practicum courses are required to complete a minimum of 120 clinical education hours each semester.

Do the instructors have experience in CT?
HCC’s instructors are ARRT certified in CT imaging and have clinical experience as CT technologists.

Will HCC provide the clinical sites for the student?
All students enrolled in the computed tomography program will be assigned to one of the clinical sites affiliated with HCC.

How many days or nights will the student have to attend lecture classes at HCC?
The majority of the courses in the CT Program are hybrid-based. Some travel to the HCC campus is required.

Additional Program Information
Additional information on program requirements including criminal background checks, drug screening, clinical site placement, readmission to the CT Program, and transferring from another college or CT Program can be found at www.hagerstowncc.edu/medical-imaging.

For more information about HCC graduation rates, the median debt of students who completed the program, and other important information, visit www.hagerstowncc.edu/medical-imaging.

Technical Standards
There are technical standards and skill requirements which students are expected to possess and demonstrate in order to be successful in this program. More information on these standards can be found at www.hagerstowncc.edu/medical-imaging.
